

ConSlitter CTRU BlueLine

Technical Data

Materials

Films, refined papers, laminates

Material thickness

10 - 500 μm

Material widths

1,450 · 1,750 mm

Parent roll diameters 1,000 · 1.300 mm

Finished roll diameters

max. 630 mm

Finished roll weights

max. 600 kg (depending on equipment)

Slitting systems

Razor blade cut · shear cut

Slitting widths

≥ 50 mm

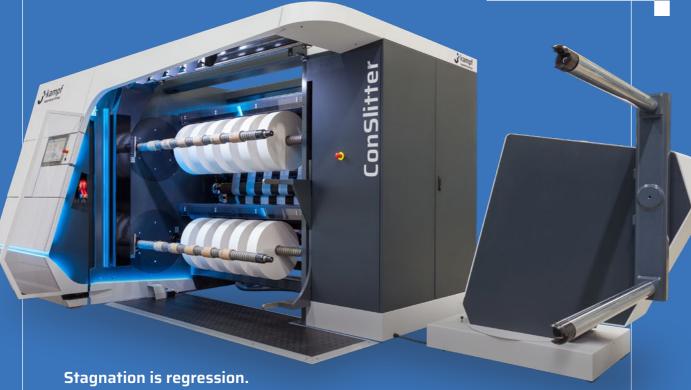

Winding cores

3" · 6"

Machine speed

max. 800 m/min

Efficiency.
A definite strength of the **ConSlitter**.

Simply increase uptime.

- Simple and reproducible laser liner support fast and precise positioning of the rewind cores.
- Fast and extendable save time and effort by using an integrated finished roll push-off system and extend this automation with a core positioning module on request.
- Effective and safe do other important tasks while your valuable finished products are automatically transferred to further handling operations with the appropriate removal module and without further operator intervention – and the ConSlitter is already producing again.

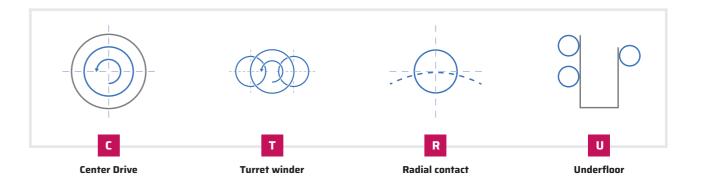

Two in One. For flexibility and throughput.

You always want to have the right answer to the changing requirements of your customers and at the same time increase your production efficiency? With the new ConSlitter you are optimally positioned for the future.

The combination of the proven KAMPF classic Conslit with the advantages of our modern turret technology enables you to reduce downtime and sustainably increase production throughput, especially when processing smaller batch sizes. Select from our extensive modular system the equipment features that optimally meet your individual production requirements.

■ Reduce set-up times ■ Automate roll logistics ■ Realize data transfer

We certainly have the right solution for you.

Improved awareness brings more security to your everyday life. An intelligent lighting concept communicates the current status of the machine. A color lighting system that changes according to the situation allows you to monitor the status of the machine both in the area around and from a distance. The other redesigned and fully integrated safety devices also provide you with a constant overview, even at a safe distance.

Security in a new light. Industrial safety with a clear view.

Look and Feel.

OPERATOR COMFORT IN A NEW DESIGN.

800 m/min max. machine speed

Simplified machine operation, optimum accessibility and integrated safety are combined by a completely new design and color concept.

The intuitive KAMPF 2-touch operation is an integral part of the striking industrial design, such as the newly designed workplaces or the future-oriented handling and digitization solutions. Behind the shape of the new ConSlitter there is, of course, as usual the state-of-the-art Siemens control system combined with precise drive technology and proven mechanical engineering.

A modular system.

OPTIONS SUITABLE FOR YOUR APPLICATION.

Expansion winding shafts Safe production for simple applications.

Friction winding shafts For reproducible quality and demanding materials.

The all-rounder for high quality with long service life. Optionally also with automatic positioning.

Razor blade cut Reasonable and good. Optionally as groove or mirror cut.

Positioning aid Time-saving and precise alignment for bottom knife and razor blade grooved bushes.

Splicing table and web control High-quality web connections - made simple. Choose the optimum splicing table.

DIGITAL CUSTOMER SOLUTIONS

The digital **customer portal my@vanced** and the **integrative platform the@vanced** make change accessible: with digital collaboration, intelligent production, and continuous evolution of know-how.

my@vanced is our digital customer portal: Up-to-date information, practical knowledge, easy spares identification, online shop, and the certainty to have all necessary information in one place – at any time.

the@vanced is our digital integrative platform. It connects value chain systems in the field of webshaped materials processing. With the <u>five packages</u> Essential, Assistance, Availability, Productivity and Connectivity it allows scalable solutions from using our Remote Service to a full integration into existing MES or ERP systems.
